

Emetologium Astronomicum:

O R,
A brief Description and Survey of the Year
of Humane Redemption, 1673.

Unto which is numbred from

Y.
The Era. } By the Oriental and Greek Christians 7181
ation } By the Jews, Egyptians, & later Rabbins 5433

But according to Sacred Writ (a His- } 5622
tory more worthy our belief)

Being the first after Bissextile or Leap-year,

And Constitution of the *Kalendar* by Julius Cæsar 1718
from the Reformation thereof by *Gregorius* ——— 91

Wherein is contained (beside the State of the Year)
the Solar Ingresses, various Configurations, Aspects,
Conjunctions, and diurnal Motion of the *Planets*; Also
an account of such eclipses that shall happen this year.
Together with useful Tables, and all other Furniture
that may conduce to the completing such a Work.
Accommodated to the Meridian of *London*, whose Zenith
is distant from the Equator, northward, 51 deg 32 min.
and, without sensible error, may serve for any part of
Great Britain.

Whereunto is added, A short discourse of the Nature of
Directiōes in *Navigatio*, and their Effects; by
the Learned *MORINUS*.

By Henry Coley, Philomath.

Ans. utraque, sed pænet Artifices repetunt.

London, Printed by John Darby, for the Company
of Stationers, 1671.

ADLECTOREM.

IN my last Tears Almanack, to gratifie the younger sort of Students, I published certain Astrological Axioms and Theorems, (but for want of room, omitted their Illustrations) from that eminently Learned Philosopher and Astrologian, Morinus of France. And herein I have adventured to insert (from the same Author) a short Discourse of the Nature and Effects of Directions in Nativities, which may serve as a sufficient Answer to the Query of a great Antagonist to Astrology, (not unknown to Morinus himself) viz. How it is possible that that place in which a Planet or Aspect was at the time of the Nativity, should so long retain an Impression then made? Why should it not effuse Health or Harm sooner or later? &c. And 'tis a question that many lovers of Art (and those very ingenious) have much desire to be satisfied in; therefore, for their sakes, I willingly undertook the publication thereof in our English Dialect; and this I hope, without the least injury done to that Learned Author. As for the late scandalous writings of that bouncing Pretender, whose confidence is notoriously known to all Artists of this Nation, I shall silently at present pass by: But if farther provoked, I shall then take occasion to Anatomize him to purpose: In the mean time (Deo volente) I shall still go on in the prosecution of my studies, and thereby endeavour to be serviceable to my Country in one kind or other, knowing that we are not born for our selves alone. And thus (Kind Reader) I commend these my endeavours to thy candid censure; and remain

A lover of Art and Honesty,

Henry Coley.

From my House at the Farther end of Rose and Crown
(Court, near Baldwins - Gardens in Grays-Inn Lane;
where such as desire it, may be instructed in several parts
of the Mathematicks; Also in the Art of Astrology.

7 July 29 1672.

The Use of the foregoing Tables.

SEek the Sum, for which you would know the Interest, in the side of the first Table, and the Time in the head thereof, and then, in the Angle of meeting you have your desire. *As for Example;* If you desire to know the Interest due for 10 l. for a quarter of a year, you have it in the first Column, being 2 s. 11 d., and the 91 part of an hundred of a penny; for half a year, 6 s. and the 20 part of an hundred; for 3 quarters, 9 s. 0 d. and the 10th part of an hundred; and for one year, 12 s. In like manner you may find the Interest for 40 l. for a quarter, to be 5 l. 19 s. 8 d. 5 parts; for half a year, 12 l. 0 s. 7 d. 89 parts; for three quarters, 18 l. 0 s. 3 d. 95 parts; and for a year 24 l. But when the Sum, for which you would know the Interest, consisteth of one hundred hundreds, ten tens, &c. You must take their respective Interests out of the Table, and add them all together: *For Example,* Suppose I would know the Interest due for 347 l. for half a year: In the upper part of the Table, under 2 Quarters, against 300, I have 9 l. 0 s. 5 d. 92 parts; over against 40 l. 1 l. 4 s. 0 d. 79 parts; and against 7 l. I find in the Table 0 l. 4 s. 2 d. 54 parts; which being added together, make 10 l. 8 s. 9 d. and 25 hundred parts of a penny, which is just a quarter, or one farthing.

The Use of the second Table.

This Table consisteth of six parts or Columns; the first whereof is to shew what any Sum will amount unto at the end of any years under 31, accounting Interest upon Interest, at 6 per cent. The second Part, is to shew what any Annuity (being forborn from year to year) will amount to at the end of any year under 31. The third Part, is to shew what yearly payment is equal to any Sum due at the end of any years under 31. The fourth Part, is to shew what any Sum due at the end of any years under 31, is worth in ready Money. The fifth Part, shews what any Annuity, to continue for any years under 31, is worth in ready money. The sixth part of the Table, is to shew what Annuity any Sum will buy, to continue for any number of years under 31.

When a Question is propounded, Consider unto which part of the Table it doth appertain, and take out the numbets in that part over against the years express in the Question, and multiply them by the sum of Money expressed in the Question, and from that Product, cut off four figures towards the right hand, and then those to the left hand are pounds: Multiply the figures cut off to the right hand by 20, and cut off four figures from the Product as before, and to the left hand you have shillings; again multiply the Figures last cut off by 12, and cut off four figures as before, and you have to the left hand pence, &c.

An Example of the first Part.

If 50 l. be put out to Interest for 15 years at 6 per cent.

What sum will it amount to at the end of that time?

Over against 15 in the first part, you have 2966, which multiplied by 50, (the number of pounds in the Question) the product will be 148300; from which cut off four figures to the right hand, & you have to the left hand 1483. then multiply 8300 to the right hand by 20, and from the Product, being 166000, cut off four figures, and you have 165. then multiply the 6000 cut off to the right hand by 12, and you have 72000, viz. 7 d. the whole answer to the Question bring 1483 l. 16 s. 7 d.

An Example of the second Part.

If 40 l. a year be forborn seven years, what will it amount to at the end of those seven years?

In the second part, against 7 years, you have 83938, which being multiplied, as in the first, you will have for answer to the question 335 l. 15 s.

An Example of the third Part.

There is 80 l. to be paid at the end of ten years; the Party who is to pay this 80 l. is willing to make over certain

Lands for ten years to make satisfaction, and is desirous to know what yearly Rent will satisfy the Debt which due, allowing Interest at 6 per cent. per annum.

In the third part, against 10 years, you have 759, which multiplied by 80, (the pounds in the question) your first Operation will be 60720; your second, 114400; and your

your third, 512809; the answer to the question being 61. 1 s. 5 d.

An Example of the fourth Part.

There are certain Lands, which at the taking Possession are worth 58 l. I desire to know what they are worth, eight years in reversion, accounting for the forbearance of the money at 6 per cent?

Overt against 8, in the fourth part, I have 6274, which being multiplied by 58, (the Sum in the Question) the Product is 3613892; the second Operation is 717840, and the last 914080, viz. 361 7 s. 9 d. being the answer to the question.

An Example of the fifth Part.

Suppose an Extent on certain Lands for the payment of 60 l. in 20 years, viz. 3 l. per annum; the owner of this

Land is willing to discharge his Extent with ready money, the question is, What Sum will discharge the same?

In the 5th part, against 20 years, you have 114692, which being multiplied by 3, the pounds in the Extent, and divided by 10000 as before, the answer to the question will be 34 l. 8 s. 2 d.

An Example of the sixth Part.

There is 104 l. to be bestowed upon an Annuity for to continue 14 years, I desire to know what Annuity it will buy to continue so long, viz. 14 years?

In the last part of the Table, against 14 years, I have 1076, which multiplied by 104, maketh 111192, the first Operation; and 318080 for the second; and 916969 for the last: The answer to the question being 11 l. 3 s. and 10 d. 5 gr.

Note, That you may estimate the value of the 4 figures cut off thus, without any further multiplications, viz. the first figure to the left hand you are to account double shillings; the second figure, if it be above 5, subtract 5 from it, and account for that 5, 1 s. and the remainder for ten times so many farthings; for you must note, that all numbers in the second and third place, not exceeding 24, are a just number of farthings; if they exceed 24, cast away 1, and the remainder is the just number of farthings sought; and all figures beyond the third place (if they were all nines) are but parts of farthings: Compare the general Rule to the former Examples, 'twill be easily understood.

January hath XXXI days.

New Moon the 8th day, at 2 in the morning.
 First quarter the 15th day, at 10 at night.
 Full Moon the 22 day, a little after 1 in the morning.
 Last quarter the 29 day, about 4 afternoon.

Unwearied *Titan* taking trusty Aim,
 Into *Joves* Bosom casts his feathered flame;
Stillborn to kifs fair *Venus* hand can run,
 And Saturn's courted by the Radiant Sun.
 If Heaven-imbrodering Stars can thus agree,
 Why ought not men to live in unity?

February, 1673.

Here *Jove* opposes *Venus*, that bright Star,
And *Mars* 'gainst *Hermes* now proclaimeth War;
But *Jove* doth interpose his friendly *Trine*,
And most men know the Stars do but incline.
If from old Rules the Effects do fully vary,
I will conclude, — *Humanum est Errare*.

March, 1673.

All-seeing *Phœbus*, having past the Line,
Salutes Old *Cronos*, and with him doth joyn;
But thundring *Jove* an angry Ray doth send,
To *Royal-Sol*, before the Month doth end;
Whose life infusing vertue, doth revive
Both Animals, and every Vegetable.

April, 1673.

Old *Cronos* now doth with great rage display,
Gainst temperate *Jove* his fierce malignant ray:
The Queen of LOVE, that lofty sparkling Star,
Joyns with bold *Mars* that mighty God of War;
But God that dwells above the starry Skies,
Will them protect, who upon him relies.

The month begins happily, 11
and all things seem in a 12
hopeful posture; Now 13
better Trading may be 14
expelled. 15

Heavens blest our Naval 22
Forces, and prosper their 23
Attempts against their 24
greatest Opposers. 25

Expect stormy weathers, 2
which I doubt may prove 3
prejudicial to the indus- 4
trious Merchant, about 5
the latter end of this 6
month, or beginning of 7
the next. 8

10

May, 1673.

When *Mars* and *Saturn* square, let's look about us,
And think there's Foes within, ev'n as without us;
Saturn moves swiftly on in *Englands* Sign,
But there is squared by his *Valentine*.
Though *Jove* in friendly manner *Phobus* meets,
Yet *Mars* by *Quartile* his grave *Worship* greets.

June hoch XXX Dayes.

New Moon the 4th day, at a little past 9 after noon.
First quarter the 11th day, about 10 in the morning.
Full Moon the 19 day, 47 min. after 3 morning.
Last quarter the 26 day, 48 min. past 6 morning.

[illegible]

June, 1673.

Illustrious *Titan* in the *Crib* is seated,
There by *Jove* and *Saturn* not well greeted;
To *Venus* also they do cast their Squares,
Yet unto *Mercury* they milder are.
To us poor Mortals these Configurations,
Brings Joy to some, but Terror to most Nations.

Probable Conjectures.

This season admits of *Edi-*
on and *doubtless* we
shall bear of notable *dis-*
turbances in several parts
of Europe — about these
days.

Mercury is friendly be-
held by the two *Super-*
iors, and probably may
becasion — many serious
Debates and *Constitu-*
tions amongst the greatest
Wits, which may not
without smart *Disputes*
on all sides.

If some *Offenders* are
brought to punishment
let them look to it — the
☐ of ☉ and ♄ seems to
infernate no less.

B 2

July hath XXXI dayes.

New Moon the 4th day, near 2 in the morning.
 First quarter the 10th day, 12 min. past 7 afternoon.
 Full Moon the 18th day, at 7 afternoon.
 Last quarter the 26 day, 16 min. past 4 afternoon.

July, 1673.

Titan, that Glorious Lamp of Heaven,
 Friendly salutes the highest of the Seven;
 And *Mars*, the God of War, doth now combine
 With *Cronos*, t'whom he sends his friendly Trine.
 Good Policy doth oft-times reach as far,
 And go beyond, even the sever'st War.

August, 1673.

Old *Saturn* his malignant Ray doth dart,
Once more at *Jove*, but who will feel the smart?
They both upon the Queen of *Beasty* frown,
And seem to strike some *Ladies* Honour down.
This is not all, they greater things portend;
What e're they be, God send a happy end.

September, 1673.

The Heaven's great Eye doth now again decline
His Course, and on the Equinoctial Line
Doth take his way, girdling i'th mist the Sky,
Dividing Day and Night most equally.
The Weather for the most part calm and fair,
With soft, free, pleasant, and transparent Air.

October, 1673.

With *Mars* and *Hermes* Jove together goes,
And fullen *Saturn* Mavors doth oppose.
Glorious *Apollo* wrapt up in a flame,
Joyns with mild Jove, but at no Warlike Game.
This Month's compos'd, what e're the event may be,
Of extream Rage, and cunning Policy.

Z D		Fuller's Lon. B.	Sun's place.	Place of ☿.	Place of ♀.	Probable Consequences.	Rom Acc.
1	3	48	18 34	51 11	02 40	The Opposition of <i>Saturn</i> and <i>Mars</i> may much in- cline some Persons to ve- ry considerable Contests. This (in all probability) will prove a Month full of Weighty Consultations, and Sharp Debates.	11

But the latter part may probably prove more serene than the former.

November, 1673.

Bold *Mars* and *Jove* the fourth day do combine
 In cruel *Scorpio*, that fallacious Sign;
 And in that viperous place we likewise see,
 Bright *Sol* conjoyn'd with nimble *Mercurie*;
 Then unto *Crosses* *Hermes* can repair,
 Raising cold Winds with dark and troubled Air.

December, 1673.

Sol Squares with *Saturn*, whose Malignant Ray,
May change the Air about the nineteenth day.
Cronos and *Mars* a friendly Trine do take,
And with *Venus* the last a Match would make:
But Shee to *Saturn* a Sheeps Eye doch fling,
And so concludes the year with Revelling.

Some Persons there are
that vigorously persecute
their Pleasures about this
time, but much to their
regretment, and find by ex-
perience, that sweet Meat
hath oftentimes sower
Sauce. Let them not buy
their Delights too dear.
The Year ends with mild
Seasonable Weather, and
in all probability we may
now expect welcome
News from several re-
more Parts, which I hope
will glad the hearts of
most men.

Who can please all? If I
but please my Friends,
I am content, and next year
may amend.

A Table of the 4 Terms and their Returns.

Hilary Term begins *January 23*, ends *February 12*,
and hath four Returns.
Ostabis Hilarii, Jan. 21. | *Crasino Purificationis*, Feb. 2.
Quind. Hilarii, Jan. 28. | *Ostabis Purificationis*, Feb. 10.
Easter Term begins *Apr. 16*, ends *May 13*, hath 6 Returns.
Quind. Pasche, April 14. | *Quinque Pasche*, May 5.
Tres Pasche, April 21:
Mens. Pasche, April 28. | *Crasino Ascensionis*, May 9.

Trinity Term begins *May 20*, ends *June 18*,
and hath four Returns.
Crasino Trinitatis, May 26. | *Quind. Trinitatis*, June 9.
Ostabis Trinitatis, June 2. | *Tres Trinitatis*, June 16.

Michaelmas Term begins *Octob. 23*, ends *Novemb. 28*,
and hath six Returns.
Tres Michael, Octob. 21. | *Crasino Martini*, Nov. 12.
Mens. Michael, Octob. 28. | *Ostabis Martini*, Nov. 19.
Crasino Animatum, Nov. 4. | *Quind. Martini*, Nov. 26.

The glorious Planet *Venus* is our bright Evening Star, from
the beginning of the year till June 20, then she becomes O-
riental, and is our Morning Star all the year following till
April 13. 1674.

Coley, 1673.

Astronomical and Astrological Observations, for the Year 1673.

Proœmium.

A *Rissole* (that great Enquirer into the works of Nature) conceived the World to be Eternal, yet he continued not always constant in that opinion : But the Scripture and light of reason tells us, that the world had a beginning, and by the help of Scripture and the works of Learned Men, we are enabled to compute (without any notable difference) how many years it is from the first beginning thereof. Hence then it may pass for an undoubted truth, that the World was not from all Eternity, but made by God our Creator, in such time as he himself pleased ; But herein there hath been no small Controversie amongst the Learned to determine the precise time of its beginning : Some affirm them jWorld had its beginning in the Summer *Solstice*, others conclude it was at the *Autumnal Equinox*, but most believe it had its first beginning at the *Vernal Equinox*, or at that time when the Sun was in the first scruple of *Aries* : And therefore Astrologers usually deduce their Annual judgement from a Scheme of the Heavens, set for the very moment of time that the Sun makes his first ingress into that point of the *Ecliptique*, wherein he was supposed to be Created.

A's

C

Coley, 1973.

As to the matter out of which all things were Created; 'tis Recorded by *Moses* to be a confused-mass, without form, and voyd, a meer *Chaos*, of which *Ovid* (who doubtless consulted his works, being before his time communicated to the Learned Gentiles) elegantly writes, and is thus rendred into *English*:

- " *Before the Earth, the Sea, and Heaven were framed,*
 " *One face had nature, which they Chaos named,*
 " *An indigested Lump, a barren load,*
 " *Where jarring Seeds of things ill. joyn'd abode.*
 " *No Sun as yet with light the World adorns,*
 " *Nor new Moon had repair'd her waning Horns:*
 " *Nor hung the self voyz'd Earth in thin Air plac'd,*
 " *Nor had the Ocean the vast shores embrac'd.*
 " *Earth, Sea, and Air, all mixt; the Earth unstable,*
 " *The Air was dark, the Sea Unnavigable,*
 " *No certain form to any one assign'd,*
 " *This that resists, for in one body joyn'd*
 " *The cold, and heat, the dry and humid fight,*
 " *The soft and hard, the heavy with the light.*

Having premised this, I come next to consider the State of the Year from the Suns Ingrefs into the *Aequinoxal sign Aries*, and other concomitant configurations of the Heavens.

Colcy, 1673.

*Of the four Parts, or Quarters of the Year 1673.
and first of the Spring.*

THE Spring Quarter takes beginning when Royal Sol makes his Ingress into the Aequinoctial sign *Aries*, or at that time (according to the Copernican System) that our Earth toucheth the first Scruple of the opposite Sign *Libra*, making the Days and Nights of equal length all over the world, (except some parts under the Poles) at which time the Sun riseth (with us) just *East*, and sets exactly *west*, having neither declination from the *Aequator*, or *Amplitude* from the *East* or *west* points of the *Horizon*. This Quarter takes beginning at *London*, according to the *Radolphine Tables*, *March* the ninth, 10. h. 11. P. M. But according to the *Caroline Tables* of Mr. T. S. the same day at 12 h. 37, 38. P. M. as appears by the following work:

The figure follows.

Coley, 1673.

156. 45.

246. 45.

Astrological Observations drawn from this Position.

Since 'tis become so usual amongst all our modern Astrologers, (as being directed by the Ancients) to draw their judgement from the Position of the Heavens at the *Suns* Ingrefs into *Aries*, (the place of the *Ecliptick* 'tis supposed he was in, at the Creation as before I hinted) I shall therefore according to that old custom deduce a brief judgement, Astrological from this present position of the Heavens with consideration also being had, to some other concomitant configurations of the *Caelestial* bodies.

First,

C 3

First, Then 'tis observable we have that viperous sign
Scorpio arising (which some are pleased to term an active
 place of the Heavens) and ♂ the chief Ruler thereof, just
 entered II and in * Aspect to the ☉ and ♄. This gives
 courage and undaunted resolutions in the people, to oppose
 and overcome their most insulting and daring enemies, and
 this is not meanly confirmed, by the presence of ♂ in the
 seventh House, there disposing of the ☾ (the principal sig-
 nificatrix of the common people.) ♂ claims the greatest do-
 minion in the Hylegiacal places of the Figure, and therefore
 we may expect that the most considerable translations of
 the revolution, should relate to such matters and things as
 are signified by him, such are acts of violence and hostility;
 quarrels, discontents, and commotions between man and
 man.

And here I cannot but concur with what that ingenious
 Artist Mr. Rich. Edlin hath writ concerning this year 1673.
 in his *Præ-Nunciis Sydereus*, "For (saith he) page 113.
 "Nor is the year 1673. without its action, for the conjunc-
 "tion of *Saturn* and *Mars* in *Novemb* 1672. in 26. of *Pisces*,
 "in square to the Sun in the great conjunction of ♄ and ♀
 "October 1663. and the Sun now in the very degree of that
 "conjunction. These also put forward the conjuncti-
 "effects, and are of concernment to some eminent persons
 "of *Spain*, *Hungary*, or *Portugal* in the year 1673. For
 "then doth that conjunction most forcibly operate and ag-
 "gravate the differences and disturbances about Religion,
 "and the rights and ceremonies of the Church; among o-
 "ther enormities (I say) these are the chief inrents of the
 "malevolent conjunction, and so he goes on; The Sun in the
 "great conjunction to a square of ♄, discovers some plots
 "and conspiracies, and some pilfering Secretary or Treasur-
 "er; Pernicious Pamphlets do prejudice the credit of
 "some great man; notorious Robberies in many places,
 "especially *South-westward* frequently committed.—But
 "toward the latter end of this year, *Saturn* and *Jupiter* to a
 "sexile of the ☿ in the great conjunction, denotes the de-
 "struction of some principal persons, members of State and
 "Church

“Church; Their addressees to Kings, Princes, and other
 “Governours and Rulers of Nations, for peace and for re-
 “conciliation of former breaches, and tedious calamities,
 “that both rich and poor have been afflicted with, who now
 “are ready for, and would be glad of peace. Thus far
 this judicious Author, whose indeavours highly deserve in-
 courage-ment.

But to our Scheme again, (which indeed is not sufficient
 (alone) for the judgement of a whole years actions, nor with-
 standing a fixed sign Ascends,) we find the Moon hath but
 lately separated from a conjunction of the ☉, ♄, and ♀,
 and applies to a void of course.

But in this our vernal Figure ♂ being in ♈, to the ☉
 and ♄, intimates obedience in the people to their Superiors,
 and no less affection to their persons; but subject to con-
 tentions amongst themselves, and they will not easily put up
 injuries offered on to the other.

Again, *Venus* in ♋ is the significatrix of the Nations ene-
 mies, which are such, doubtless that can not, nor will they
 attempt any thing that may be detrimental unto us this
 year, and therefore the less to be feared, for ♀ always de-
 notes a very mild and gentle Adversary; and hence it may
 be hoped we shall enjoy a peaceable year, provided there be
 but a reasonable harmony amongst our selves, but ♀ meets
 with two oppositions of ♄ this year, and no less then three
 times were those Planets in the same Aspect the latter end of
 1671. and in the year 1672. which configurations are of
 eminent signification, and doubtless will have as famous
 effects for some succeeding years.

For if the conjunctions of those Superior bodies are of
 such eminent note, and produce so great alterations in the
 World, as by experience in some late years we have plenti-
 fully seen. Certainly, their oppositions can not be less sig-
 nificant, but must also be the *Prodromus* of as remarkable
 mutations; the compleat handling whereof would require a
 Treatise, and (as I am informed) is already prepared, and
 will shortly be made publick by the ingenious Author of
Premia. Syder. before mentioned. But to speak more parti-
 cularly

cularly from this Schemme, we find h in V combust of the
 $\odot$, and there in his fall upon the Cusp of the fifth House,
 which signifies great prejudice to Women with Child, ma-
 ny Miscarriages or Abortions, dangerous hard Labours; as
 also tedious distempers occasioned by surfeits and excessive
 drinking; the J being in the fifth House in δ to V seems
 to confirm the aforesaid judgement. And V in the
 11th. promises that men may enjoy their expectations with
 comfort and reasonable gain by Trade, but were not V in
 δ to the J , this judgement would rake place more fully
 then now I fear it will. Again, δ in the seventh shews much
 Robbing, sometimes Wars, Quarrels, Fraud and Deceit a-
 mongst Merchandizers, which judgement is much alleviated
 by the presence of Q so near the Cusp of the seventh House
 in her own dignities, which seems to promise a good agree-
 ment between men and women, and consequently many
 Marriages during this years revolution. But Q in detriment
 in the fourth, denotes discords between persons, sometimes
 occasioned by false Writings or Libels, &c. but being in X
 to, and disposed of by Q , in her exaltation, this doth much
 abate the evil threatened, and thus I conclude my judgment
 upon this your revolution, wishing Great Britain may long
 continue as the Poet *Alfred* of *Beverley* writes, and is thus
 rendered into English: viz.

*A wealthy Island, which no help desires,
 Yet all the world, supply from her requires:
 Able to glut King Solomon with pleasures,
 And surfeit great Augustus with her Treasures.*

which brings me to a full conclusion of this Spring quar-
 ter, with this piece of Poetry.

*The little Birds do strain their pretty Throats,
 And now begin to warble forth sweet Notes,
 And Phœbus posting towards the Northern wain,
 Doth cause each Virgin to grow amain,*

Mountain

Coley, 1673.

Spring
 { Mountains and Valleys, which of late were seen
 Russet and grey, look cheerful now and green,
 Each Tree a new green Topping puts on,
 And Plants eye Splendor with the Radiant Sun.

Of Summer.

Which this year takes beginning June the tenth, 13^h.
 13^m. P. M. At which moment of time unwearied
 Titan enters into the first minute of the Tropical cold and
 moist sign *Cancer*; then making his greatest Meridian Alti-
 tude, as also his greatest declination *Northward*, whence is
 occasioned (to all those Inhabitants that dwell on the *North*
 side the *Æquator*) the longest day and shortest night, and
 the contrary to those that dwell *Southward* of the *Æqui-*
 nox, and now hath the Sun his greatest amplitude of rising
 and setting from the *East* or *West* points of the Horizon.

Summer.
 { The Cranied Earth gapes for the Clouds to shew
 Down Rain, which she will greedily devour,
 The Fields white headed be with bearded Grain,
 Which Titan with his Beams doth parch again;
 The Husbandman rejoiceth now to go
 Into the Fields, his Grain that's ripe to Mow;
 And Sol descending from the Tropick Sign,
 Hasteth apace to th' *Æquinoctial Line*.

Of Autumn or Harvest.

Which commenceth this present year upon the 12th.
 day of September at 4 h. 47 m. P. M. at which moment
 Sol (that glorious Lamp of Heaven) enters the first *Scruple*
 of the *Æquinoctial* sign *Libra*, whereas the Earth at the same
 time (according to the *Copernican* System) touches the first
Scruple of the opposit sign *Aries*. The Sun hath now neither
 declination nor amplitude, but imbalances his Rayes again
 with equal poyz to all Terrenal Inhabitants.

Now

Colley, 1673.

Autum.
 Now do the Trees mourn for their falling Fruit,
 And cast aside for grief their Summer Juice,
 Wiltst that the gentle murmuring winds effords;
 To their dumb sorrows, sighs instead of words;
 From his Imperial Throne the Sun descendeth,
 And towards the Antartick Pole his progress bendeth,
 Into the hungry Earth the Seeds do fall,
 Who gives unto them life by Burtal.

Of the Winter, or Hyemnal Quarter.

Winter, (the last Quarter) according to our English account (but the first Astronomical Quarter of the next year) takes it beginning this year December the tenth 16 h. 20. P. M. as which moment the ☉ touches the first scruple of the Tropical sign ν^o , thereby producing our shortest day and longest night, and the contrary to that which Inhabit the Southern side the Aequator. Now the ☉ makes his greatest Southern declination, and least *Miridian* altitude, at which time he also attains his greatest Southern amplitude, from the East and west points of the Horizon.

Winter.
 Behold the sapless Trees stand shivering now,
 Amidst the cold sharp Air, Frost, Hail and Snow,
 And Flora in her Mothers womb doth hide
 Her self, because not able to abide
 The blustering blasts of bellowing Borcas breath,
 But still expects the Spring to give her birth.
 Till when (Entombed in obscurity,
 She cannot shew the world her bravery,

Of Directions in Nativities and their effects, according to Morinus.

Since 'tis certain that the term of directions i. e. the place of the significators and promissors are fixed in the Pri-

nam Mobile, as appeareth by the Planets, Transfers by the same, and that the effect of a direction is neither from the significator or promotor alone, but from both concurring, and that such concurrence cannot be of terms immovable; hence arises no small difficulty, to apprehend how the effects come to be produced and break forth into act, after they have so long lain hide in power.

First, For the untying which knot we say,

1. The several Culps of the Houses, the Planets and their Aspects at the moment of birth, are actually determined to some particular thing in respect of the Native, but potentially to divers other things, so *Saturn* in the first House is actually determined to the Natives temperament, health, manners, ingenuity &c. But potentially to all accidents represented by the other Houses respectively, as to cause diseases by direction of the *Sun* in the 12th. &c. And *Jupiter* in the eleventh is actually determined concerning the Natives friends, but Potentially concerning the Natives honours, which he is found to cause by direction to the mid Heaven, and so of the rest.

Secondly, That the Influx of the Coelestial Figure at the moment of birth is impressed on the sensible part of the Native, not confusedly but distinctly, that is as the parts of Heaven and the Planets are determined in the Figure, so is the Influential Character of that Figure in the Native, observing veruallly the same situation, order and distances, of significator and promitor, as are found in the figure it self, erected for the Longitude and Latitude of the place of birth: so that the Coelestial figure is not only the external principle of life to the Native, but likewise the efficient cause of a like internal principle in the Native, whence arises that manifest, yet admirable consent between Heaven and the Native in doing and suffering.

Thirdly, That every significator in the figure of Heaven, whether Planet or Culp, ruling by its verue as well essential as accidental in the Native, by imprinting his Character, is some principle of Life, Action, Marriage, or Passion, to which by a potential determination, the other parts of the figure,

figure, whether Planets or Aspects are referred, so that forwards things will happen concerning that principle, as the said places are naturally or accidentally determined unto, and in the same order of time, as is the distance of those places from such principles, so as the nearest will soon be brought out of power into Act, *i. e.* will first produce its effect; As if thou follow the *Horoſcope*, first *Mercury* being Lord thereof, the Quadrat of *Mars* Lord of the eighth House, then the Trine of *Jupiter* Lord of the ninth; From the first direction the Native will be inclinable to Learning, or some other dignous sickness, which if he escape, the third direction will render him much addicted to Religion, and of a very devotional temper, &c.

Fourthly, That since the Coelestial Figure at birth is a thing stable and permanent, wherein causally and implicitly is contained the whole life of the Native, with his accidents; and such accidents admit of succession & order, there must be some cause in Heaven thereof, which can be no other then the succession and order of the promittors potentially determined in respect of the antecedent Significators, for all determination on potential, tends of it self to an actual; *i. e.* the Planets and their Aspects are to be reduced from this potential determination into act, which is done by the first revolution of the first Heaven that begins at the moment of birth, for whilst by such natural revolution every promittor is brought to the Circle of Position, which each significator possessed at that moment, the same is actually determined to produce an effect at some time, according to the significators nature and situation, whereby according to the several natural directions of the promittor to the several antecedent signifiers, there is a vertue successively impressed on the native as a supplement of the universal impression at birth, and which doth explain its particular fate, and efficaciously combines and orders the same, according to the series of time. *Fifthly*, Now the effects of a direction cannot be produced at the very moment of the Nativity, because then the promittor is not actually in the place of the signifier

icator, but only potentially, and therefore its effects afterwards brought into act by successive motion, about so many years from the *Genesis*, as the promittor is distant degrees of the Equator from the Circle of Position of the signifier; the reason whereof is thus: *viz.*

1. The determinative virtue of the Houses to divers kinds of effects is known by experience, now the Cusps of the Houses are circles of position, and that Circle of Position, on which a Planet or other signifier falls at moment of birth, receives from such a Planet or signifier, a peculiar virtue in respect of the nature concerning things belonging to that house, according to the nature and state of such a Planet, and this virtue is imprinted in the native at the moment of birth, and therefore when the promittor by the first revolution of the first Heaven, is brought to the same circle, it is determined for the producing an effect at some certain time as aforesaid, and the virtue of such determination being made by the successive motion, is likewise impressed on the native, and there being both in Heaven, and the Native such a course and conjunction of the promitters and signifiers virtues, as they are successively in the same circle of Position; it thence comes to pass, that in the time marked out by the Ark of that motion something happens to the Native, of the nature of the signifier and promittor in things essentially signified by that House, wherein such a Circle of Position is found, from all which it is evident.

Sixthly, That though the terms of directions remain fixed and unmovable in the Heavens, yet their effects may be produced on Earth, *viz.* in Man, because by the radical Influx of the Coelestial figure at the moment of birth, and the first revolution of Heaven afterwards, there is made and impressed on the Native a concurrence of these terms, efficacious for the producing effects at a certain designed and limited time, *viz.* after so many annual revolutions of the Sun, as the Ark of direction contains of his diurnal ones or therabouts. Thus it appears that the effects of a direction is not produced solely by the impression made at the moment of birth, nor

not from Heaven alone, but from both conspiring, and the too not without the actual concurrence of annual (and monthly) *Revolutions* and *Transits* which are required, and again produces the virtue of the directions imprinted at the nativity into act, and thence it comes to pass that the effects do not always happen precisely at the time signified by the direction, but are sometimes hastened, or retarded, or fall out before or after it.

Seventhly, A *Significator* is nothing but a Coelestial substance, i. e. a part of Heaven, or a Planet signifying of it self by reason of its determination, concerning some kind of accidents of a native, whence it is also said to be the signifier of such kind of accident, so far as the same is to be affected by the direction. Hence it appears there are many signifiers for *Directions*, as there are Planets and Houses, to which if we add the part of fortune, there will be twenty in all.

Eighthly, But note by Planets we mean not the bodies of the Planets, but their fixed places in *Primo mobile*, or those parts of the *Primo mobile*, determined to the nature of the said Planets at moment of birth; note farther, that each Planet may have as many significations as it hath ways to be determined concerning the native, as being in one House and Lord of another; it will signifie the different accidents belonging to each of those Houses, and therefore shall be directed for them both; so also every kind of accident hath several signifiers, as life by the *Horoscope* and its Lord, or a Planet in the first, or its disposer &c.

Ninthly, A *Promissor* is a part of the *Primo mobile*, determined concerning some certain kind of those accidents happening to a Native, or the second term of a direction, as it by it self presages something to come concerning any thing represented by the signifier, or to the Native in respect of such a subject; as *Mars* concerning life represented by the *Horoscope*, portends danger to the Natives life (or to the Native in respect of his life) by some deadly wound or death, &c.

Enley, 1673.

By part of *Primum mobile*, we mean the places of the bodies and Aspects in the *Primo mobile*.

The Conclusion.

I Am confin'd, my Limits bid me stay
My Pen, and to the Press send Post away;
As for th'Errata's, what so e're they be,
Let them be pardon'd, you'll deal candidly:
And then if Momus carp and aet his part,
I'll inform the World, that none so well knows Art
As he, (*who* Boasts, and Huffs, and Vaunts so high,
As if beyond the Moon he needs must fly,)
Let him go on and aet what he thinks meet,
He may in time do Pennance in a Sheet;
His rugged Malice shall not be forgot,
I'll watch his Waters, and so spoil his plot,
And soon may gain such skill, to' *sour* so high,
As write a BODY of ASTROLOGY.

Nimis de dignatur mortalitatem
qui errasse erubescit.

FINIS.

ADVERTISEMENT.

C*lavis Astrologiæ*, or a Key to the whole Art of Astrologie, in two parts; The first being an easie introduction thereunto; As also *Horary Questions* and *Elestial*. The second Part shews the exact performance of *Nativities*, viz. their Rectification, Calculation, and Judgement; according to the best Authors, with divers varieties in *Calculation*, not before made publick, Composed by the Author hereof *Henry Coley*.

Meteorologie, Or the true and Genuine way of judging the Weather, the like not hitherto extant, By *William Cook*.

Stereometrical Propositions, variously Applicable, but particularly intended for Gauging, By *Robert Anderson*. All these three are sold by *Josuah Conyers*, at the *Raven in Duck-Lane*.

Synopsis Medicinæ, or a Compendium of Astrological, Geological and Chymical Physicks, Philosophically deduced from the principles of *Hermes* and *Hippocrates*, in three Books, by *Will. Salmon*.

Poligraphice, or the Art of Drawing, Limning, Painting, Washing, Graving, Etching, Dying, Colouring, Varnishing; and Gilding, The second Edition, Corrected, Enlarged, and Illustrated with divers Copper Cuts, by *Will. Salmon*; These two last are sold by *Rich. Jones*, at the *Golden Lyon in Little Brittain*.

In *Monmouth street*, near *Spittle Fields*, next door to the *Coopers Arms* lives *Mr. Jacob Lamb*, an experienced Physician; Where all persons that have occasion may be furnished with excellent preparations, for the Cure of most Distempers, incident to Humane Bodies.

Πυρρολογια, or a Rational Account of the causes and cures of *Agues*, &c. an ingenious Physical Discourse; by *Robert Talbot* Student in Physick, sold by *R. Robinson*, near *Greys-Inn Gate*, *Holborn*.
